

# All About Laser Hair Removal

*Painfree- Non Invasive- No Downtime*

## What is Laser Hair Removal?

Laser hair removal is one of the most commonly done cosmetic service in the U.S. During laser hair removal, a laser emits a light that is absorbed by the pigment (melanin) in the hair. The light energy is converted to heat, which damages the sacs within the skin (hair follicles) that produce hairs. This damage inhibits or delays future hair growth. Several sessions are recommended to reduce hair because the follicles can only be affected while hair is in the growth stage. Since not all of your hair develops at the same time, sessions are scheduled several weeks apart based on the treatment area.

## Is Laser Hair Removal right for me?

If you desire freedom from shaving or waxing unwanted hair than Laser Hair Removal could be right for you. During the initial consultation, we will review your skin type, hair color and skin sensitivity will help determine a personalized treatment plan to ensure beautiful, smooth results that you'll love.

## How often, how many treatments and how long are the treatments?

The results of Laser Hair Removal will be different for people based on their skin color and hair type. Results are usually visible immediately. However, for best results, a course of 4-8 treatments per treatment area is recommended. Treatment time can range from 10-30 minutes or more depending on the body part. After each session you will see substantial visible hair reduction. Each laser hair removal treatment will result in hair growth reduction. Additionally, hair will grow progressively slower, lighter, and finer with each treatment.

## What areas of the body can be treated?

We can help you get rid of unwanted hair just about anywhere on your body. Whether it's your underarms, lip/chin, legs, arms, back, chest, bikini area — basically anywhere except the scalp and right around your eyes.

## Is it painful? Is there any downtime with Laser Hair Removal treatments?

Our equipment offers new cooling technology to cool the skin with each laser pulse, offering a near pain free experience. Depending on what body part is being worked on, some clients can describe the sensation similar to the feeling of being snapped with a rubber band. There is no downtime with Laser treatments and you can go back to daily life immediately following your treatment. Please do read through the pre/post instructions to ensure proper pre/post care instructions are followed.

## How fast can I expect to see results from Laser Hair Removal?

Most people start to see results of laser hair removal treatments within the first few weeks after their first appointment at about a 20% reduction. You will continue to see reduction with each treatment and could reach an 80% to 90% total reduction. Your results will be obvious as your hair begins to fall out, and while you may see hair regrowth, you should notice that hair is growing back more slowly than before. To keep the area free of hair, a client may need maintenance laser treatments.

## What does it cost?

The cost of Laser Hair Removal is different depending on the body part and number of treatments. Our technician will work with you to personalize a treatment plan that fits your needs.
